PURCHASING EQUIPMENT A Case Study Approach to Efficiency and Cost Effectiveness Aaron Neufeld, O.D.

OBJECTIVES

Understand Cost
Benefit Analysis
and Return on
Investment

Apply these
Principles to
Investments in
Various Pieces of
Optometric
Equipment

03

Determine how each equipment analysis benefits both the practice and patient

Why is this IMPORTANT?

• Free cash flow (FCF) is the money a company has left over after paying its operating expenses (OpEx) and capital expenditures (CapEx).

- The more free cash flow a company has, the more it can allocate to
 - Dividends
 - Paying down debt
 - Growth opportunities

Why is this IMPORTANT?

If we can make smart decisions on <u>capital expenditures</u> via equipment, we have the opportunity of **increasing free cash flow**.

However, a poor decision in acquiring equipment via capital expenditure can result in a hit to free cash flow and rare instances cause it to go negative.

Calculating FREE CASH FLOW

Free Cash Flow =

Sales Revenue - (Operating Costs + Taxes) - Required Investments in Operating Capital

Calculating FREE CASH FLOW

Free Cash Flow =

Sales Revenue - (Operating Costs + Taxes) - Required Investments in Operating Capital

We all focus on INCREASING this

We should also focus on REDUCING this

FACTs about Cash Flow

Look at Overhead

- General Overhead
 - Staffing
- Cost of Goods
 - Inventory
 - Frames
 - Lens
 - Consumables
- Capital Expenditures
 - Equipment

FACTs about Equipment

- The only one that recognizes a fancy brand/model is YOU (not the patient)
- Function over form
- Used doesn't matter if it works
 - But...warranty issues
- Your Rep does NOT care about you

FACTs about Equipment

- Not Every Practice Needs an OCT
- Not Every Practice Needs an Optos
- Not Every Practice Needs an IPL
- Some practices need 3 of each

FACTs about Equipment

Delayed pain happens too often

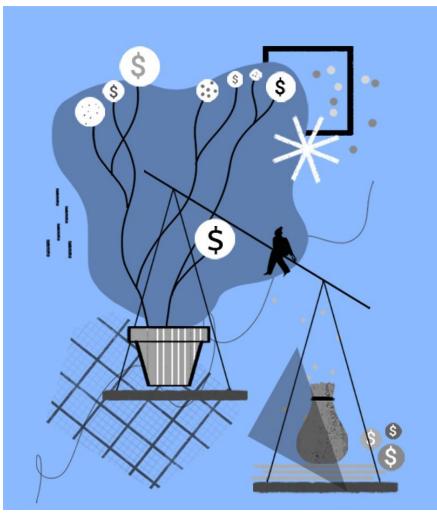

- Easy financing
- FOMO
- Effect seen years later with compounding losses

slido

How do you approach big purchases?

i Click **Present with Slido** or install our <u>Chrome extension</u> to activate this poll while presenting.

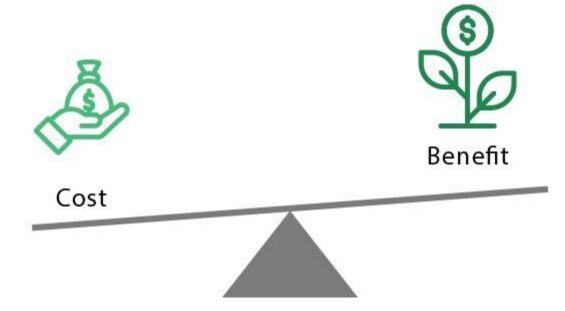

Cost-Benefit Analysis

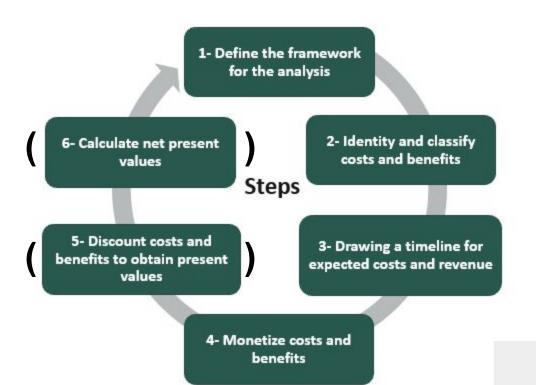

[kós(t)-'be-nə-,fit ə-'na-lə-səs]

A systematic process of evaluating the desirability of a decision by weighing its potential benefits and costs.

Cost Benefit Analysis

Cost-Benefit Analysis

1- Define the framework for the analysis

- What the Equipment is
- The Different Variants and Prices
- The Intended Procedures to be performed
- The approximate active patients that could benefit from equipment

2- Identity and classify costs and benefits

Costs

- Machine
- Maintenance
- Insurance
- Space
- Training
- Time

Benefits

- Patient Outcomes
- Efficiency
- Reimbursement
- Further Services/Materials
- Referral

3- Drawing a timeline for expected costs and revenue

Costs

- Financing vs Buying Up Front
 - Monthly Payments Financing
 - Buying Up Front Cash Reserves
- Maintenance plans + insurance

Revenue

- Reimbursement
 - How many patients per month?
- Secondary Revenue
- Gained Efficiencies
- Intangibles

4- Monetize costs and benefits

Costs

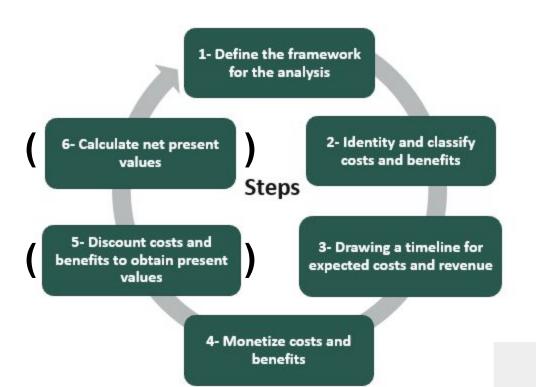

- Financing vs Buying Up Front
 - Monthly Payments Financing
 - Buying Up Front Cash Reserves
- Maintenance plans + insurance
- Intangibles

Revenue

- Reimbursement
 - O How many patients per month?
- Secondary Revenue
- Gained Efficiencies
- Intangibles

Apply \$\$ Values to Each!

Cost-Benefit Analysis

(Optional)

5- Discount costs and benefits to obtain present values

Present Value Formula and Calculation

Present Value =
$$\frac{\text{FV}}{(1+r)^n}$$

where:

FV = Future Value

r = Rate of return

n =Number of periods

6- Calculate net present values

Net present value formula

$$NPV = \frac{R_t}{(1+i)^t}$$

- R. = net cash flow at time t
- = discount rate
- t = time of the cash flow

We want a good ROI...

What is ROI?

Return on Investment - financial metric that measures the profitability of an investment relative to its cost. It's commonly expressed as a percentage and helps assess the effectiveness of an investment decision

ROI = Net Profit/Cost of Investment x 100 (where Net profit = total revenue - total cost)

slido

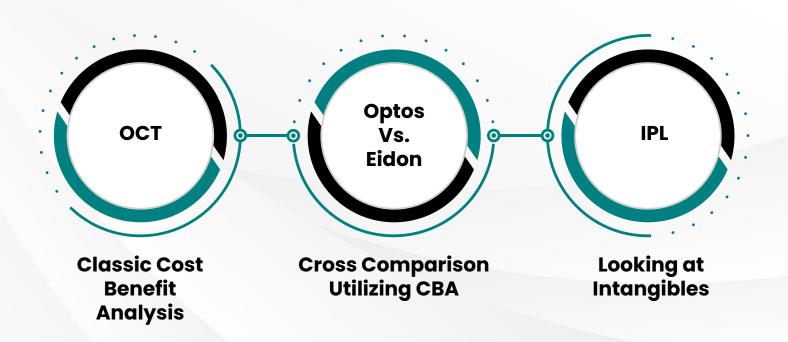

What is the most important benefit a new piece of equipment can bring in?

Click **Present with Slido** or install our <u>Chrome extension</u> to activate this poll while presenting.

In reality, all three of these points work <u>synergistically</u>

Analyzing **Examples**

Cost Benefit Analysis - OCT

slido

Who has an OCT in their office?

i Click **Present with Slido** or install our <u>Chrome extension</u> to activate this poll while presenting.

Cost Benefit Analysis - OCT

NOTE: We will be making some simplifications in our breakdown

Equipment: OCT

Price Range: \$50,000-\$120,000

Reimbursement codes: 92132, 92133, 92134

Active Patients: 2000

Patients w/ Dx codes that fit OCT: 200

1- Define the framework for the analysis

Tangible Costs:

- Staff time cost
- Dr time cost
- Biller time
- Maintenance per yr
- Energy cost
- Footprint
- Property Tax

2- Identity and classify costs and benefits

Intangible Costs:

- Footprint opportunity
- Upgrade miss
- Lemon potential

Tangible **Benefits**:

- Manage/bill for glaucoma
- Manage/bill for AMD
- Manage/bill for retinal conditions
- Anterior segment options
- Keep patients in house
- Specialty lens fits
- Less liability, better ID

2- Identity and classify costs and benefits

Intangible **Benefits**:

- Office perception
- Possibility to max.
 chair time revenue

3- Drawing a timeline for expected costs and revenue

JAN FEB MAR APR MAY JUN JUL AUG SEP OCT NOV DEC

Initial Capital Cost: \$60,000

Projected revenue Generated Annually: \$10,000 (200 patients at \$50 each)

- **Staff time per usage** (@ \$20/hr) 15 min = \$5/patient \$500/100 patients
- **Doctor time per usage** (@ \$60/hr) 5 min = \$5/patient \$500/100 patients
- **Biller time per usage** (@ \$15/hr) 3 hrs/100 patients \$45/100 patients
- Avg. Maintenance cost per year \$200
- Energy cost per usage \$0.25 \$0.25 x 100 patients \$25
- **Footprint** 10 sq ft @ \$30 sq ft/yr lease = \$300/yr
- **Property tax** not applicable in this instance

4- Monetize costs and benefits

Initial Capital Cost: \$60,000

Projected revenue Generated Annually: \$10,000 (200 patients at \$50 each)

- **Staff time per usage** (@ \$20/hr) 15 min = \$5/patient \$500/100 patients
- **Doctor time per usage** (@ \$60/hr) 5 min = \$5/patient \$500/100 patients
- **Biller time per usage** (@ \$15/hr) 3 hrs/100 patients \$45/100 patients
- Avg. Maintenance cost per year \$200
- Energy cost per usage \$0.25 \$0.25 x 100 patients \$25
- **Footprint** 10 sq ft @ \$30 sq ft/yr lease = \$300/yr
- Property tax not applicable in this instance

4- Monetize costs and benefits

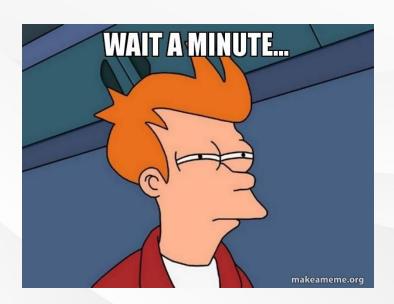

So if we add all of these up, our total cost per year to run the OCT on 100 patients comes up to:

\$500 + \$500 + \$45 + \$200 + \$25 + \$300 = \$1570/year. Certainly not a huge amount, but enough to be seen as significant!

Year 1: Revenue = \$10,000 \$7857 depreciation → \$3300 tax savings (assume \$1M gross, 8.84% Corp Tax)

ROI = Net Profit/Cost of Investment x 100 (where Net profit = total revenue - total cost)

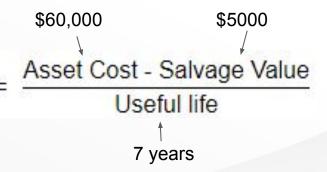

Year 1: Revenue = \$10,000 \$7857 depreciation → \$3300 tax savings (assume \$1M gross, 8.84% Corp Tax)

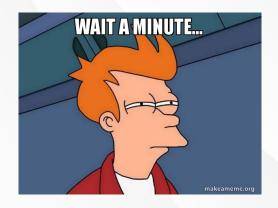

Tangent: The Power of Depreciation

Straight Line Method:

Depreciation per year =

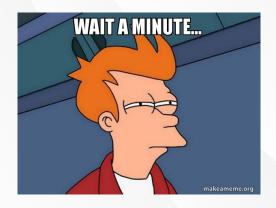

Other Methods:

- Declining Balance
- Sum of the Year's Digits
- Units of Production

Tangent: The Power of Depreciation

Year 1: Revenue = \$10,000 \$7857 depreciation → \$3300 tax savings (assume \$1M gross, 8.84% Corp Tax)

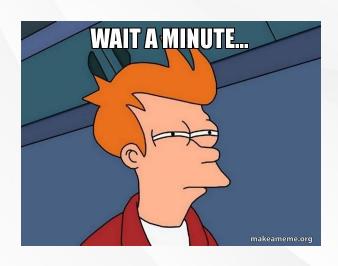

Result

With the straight line method, the depreciation per year is \$7,857.

Year	Beginning Book Value	Depreciation Percent	Depreciation Amount	Accumulated Depreciation Amount	Ending Book Value
1.	\$60,000	14.29%	\$7,857	\$7,857	\$52,143
2.	\$52,143	14.29%	\$7,857	\$15,714	\$44,286
3.	\$44,286	14.29%	\$7,857	\$23,571	\$36,429
4.	\$36,429	14.29%	\$7,857	\$31,428	\$28,572
5.	\$28,572	14.29%	\$7,857	\$39,285	\$20,715
6.	\$20,715	14.29%	\$7,857	\$47,142	\$12,858
7.	\$12,858	14.29%	\$7,857	\$54,999	\$5,001

Tangent: The Power of Depreciation

PSA: Have your CPA do this

DISCLAIMER

This presentation is for your information and entertainment only and does not constitute formal, personalized financial, accounting, or legal advice.

Year 1: Revenue = \$10,000 \$7857 depreciation → \$3300 tax savings (assume \$1M gross, 8.84% Corp Tax)

ROI = Net Profit/Cost of Investment x 100 (where Net profit = total revenue - total cost)

```
Year 2: revenue = $15,000 (vs $10,000 in yr 1)
$7857 depreciation → $3300 tax savings
(assume $1M gross, 8.84% Corp Tax)
```

Year 2: ROI =
$$[(\$25,000+\$6600) - (\$60,000 + \$3140)]$$

\$60,000 x 100

ROI = -52.57%

Year 3: revenue = \$20,000 (yearly \$5000 increase) \$7857 depreciation → \$3300 tax savings (assume \$1M gross, 8.84% Corp Tax)

	Year 1	Year 2	Year 3	Year 4	Year 5	
Revenue	\$10,000.00	\$15,000.00	\$20,000.00	\$25,000.00	\$30,000.00	\$100,000.00
Depreciation	\$7,857.00	\$7,857.00	\$7,857.00	\$7,857.00	\$7,857.00	\$39,285.00
						\$139,285.00

ROI = -13.73%

x 100

Year 4: revenue = \$20,000 (yearly \$500 increase) \$7857 depreciation → \$3300 tax savings (assume \$1M gross, 8.84% Corp Tax)

	Year 1	Year 2	Year 3	Year 4	Year 5	
Revenue	\$10,000.00	\$15,000.00	\$20,000.00	\$25,000.00	\$30,000.00	\$100,000.00
Depreciation	\$7,857.00	\$7,857.00	\$7,857.00	\$7,857.00	\$7,857.00	\$39,285.00
						\$139,285.00

BREAK EVEN IN 4th YEAR!

Year 5: assume \$5000 increase every year \$7857 depreciation every year

	Year 1	Year 2	Year 3	Year 4	Year 5	
Revenue	\$10,000.00	\$15,000.00	\$20,000.00	\$25,000.00	\$30,000.00	\$100,000.00
Depreciation	\$7,857.00	\$7,857.00	\$7,857.00	\$7,857.00	\$7,857.00	\$39,285.00
						\$139,285.00

ROI = +81%

(remember 3 yrs of negative ROI)

Shortcomings with our Example:

- We assume equal tax burden + rates year after year
- We assume a constant growth curve
- We did NOT account for increase in salaries nor the increase in hours needed for seeing more patients
- All ROIs instantaneous, true ROI not seen until Year 6
- We assumed buying in full how about financing?

Return on Investment-OCT

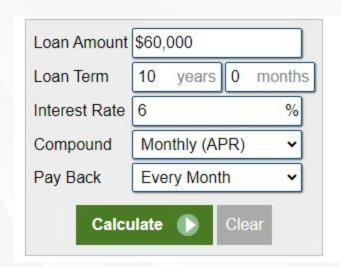

Year 3: revenue = \$20,000 (yearly \$500 increase) \$7857 depreciation → \$3300 tax savings (assume \$1M gross, 8.84% Corp Tax)

	Year 1	Year 2	Year 3	Year 4	Year 5	
Revenue	\$10,000.00	\$15,000.00	\$20,000.00	\$25,000.00	\$30,000.00	\$100,000.00
Depreciation	\$7,857.00	\$7,857.00	\$7,857.00	\$7,857.00	\$7,857.00	\$39,285.00
						\$139,285.00

ROI = +28.2%

BREAK EVEN IN 4th YEAR!

What if we financed?

What if we financed?

Year 5: assume \$5000 increase every year \$7857 depreciation every year

	Year 1	Year 2	Year 3	Year 4	Year 5	
Revenue	\$10,000.00	\$15,000.00	\$20,000.00	\$25,000.00	\$30,000.00	\$100,000.00
Depreciation	\$7,857.00	\$7,857.00	\$7,857.00	\$7,857.00	\$7,857.00	\$39,285.00
						\$139,285.00

ROI = +35%

Instantaneous BREAK EVEN in YEAR 5 w/ much lower ROI, true ROI most likely in Year 7

slido

How are you feeling after that classic CBA walkthrough?

i Click **Present with Slido** or install our <u>Chrome extension</u> to activate this poll while presenting.

Takeaways - OCT

- Accounting for ALL expenses is vital in getting a true look at ROI
- Establishing a timeline to profitability can help us plan + forecast cash flow
- Financing will push back break even point
- Depreciation plays a factor in all equipment purchases

- CBA is a great way to pit two pieces of equipment against each other
- Can help even emotions with logic
- Can tell us what is best for our unique situation

Optos California

iCare Eidon

slido

What UltraWideField imaging device do you have in your practice?

i Click **Present with Slido** or install our <u>Chrome extension</u> to activate this poll while presenting.

Optos California

~\$105,000 (\$100,000)

iCare Eidon

~\$60,000 (\$47,000)

Similarities

Optos California (\$100k)

iCare Eidon (~\$50k)

- Value Proposition (screening fee + 92250 ability)
- Patient demographic capture
- Footprint
- Overall operation

Differences

Optos California (\$100k)

- Cloud based
- Faster imaging
- One flash
- Softer Flash
- Larger support network
- Customer service issues

iCare Eidon (~\$50k)

- Server based (LAN)
- Slower imaging
- Multiple flashes
- Harsher flash
- Smaller support network
- Better customer service reputation

The Reality

Optos California (\$100k)

- Ease of use
 - Efficiency
- More familiar UI

iCare Eidon (~\$50k)

 Will show an earlier positive ROI most likely

Optos California vs iCare Eidon

- CBA helps us delineate benefits numerically
- Key Tradeoff #1: Price point
- Key Tradeoff #2: Operation (staff + pt standpoint)

- Despite the number-heavy methodology of CBA intangibles can play a deciding factor for certain pieces of equipment
- Intangibles can hold significant risks and benefits

IPL

OA iLight IPL ~\$37k

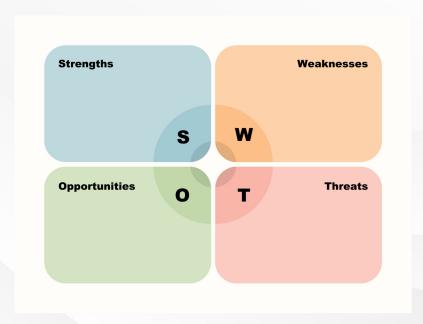

Lumenis IPL ~\$80k

InMode IPL ~\$110k

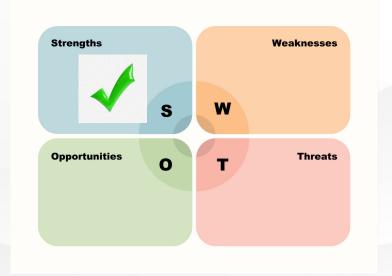

Bring out the SWOT

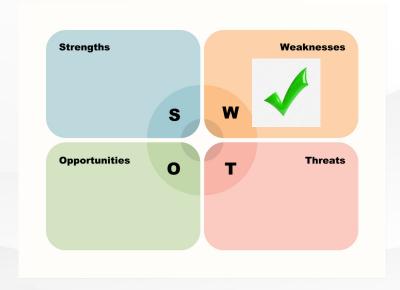

IPL - Strengths

- Dry eye treatment efficacy
- Aesthetics applications
- Alternative treatment for patients

IPL - Weaknesses

- Consistency
- Marketing
- Time
 - "Selling"
 - Performing
- Scheduling

IPL - Opportunities

- A new patient base
- Niche differentiation
- Set your fees
- Significant revenue boost
- Sell other services
 - LLLT, RF, PPs, etc.

IPL - Threats

- Over 10 manufacturers
 - o This is niche!
 - Oversaturation
- New therapy
- Inability to sell service
- Poor patient experience

Which one are you choosing...or do you even need one?

OA iLight IPL ~\$37k

Lumenis IPL ~\$80k

InMode IPL ~\$110k

IN CONCLUSION

01

Understand everything that affects free cashflow 02

Run a full CBA on capital expenditures 03

Cross compare, understand intagibles

Realize the power large purchases make for your practice both in the present, and the FUTURE.

THANK YOU!
